

CineGizmo introduces CineTakes Plugin for Adobe Premiere for easier takes and metadata collection during shoots using professional ARRI workflows with ARRI ALEXA Mini, Mini LF and AMIRA

Filmmakers now have an excellent plugin they can use to make post-production much easier. The CineTakes Plugin comes with powerful features like a voting system and voice recording markers

November 29th, 2019; Timisoara, Romania: CineGizmo announces its latest plugin: CineTakes Plugin for Adobe Premiere. The plugin is designed to facilitate the synchronization of the recorded take metadata on compatible ARRI cameras.

CineTakes Plugin for Adobe Premiere has the ability to automatically load all data, gathered on set by CineTakes for iOS, including takes metadata, votes, markers, notes, voice markers, directly into Adobe Premiere. Users will be able to find the markers added on set directly in the Premiere sequence. For more info and to download the plugin, please visit: <https://cinegizmo.com/adobecinetalesplugin.php> The plugin is also available on the [Adobe Exchange](#).

CineTakes Plugin for Adobe Premiere comes with many powerful features that makes metadata collection and management much easier and facilitates a seamless workflow between the production and post-production teams. After using CineTakes on set, which collects all data automatically via wireless connection to the ARRI ALEXA Mini, Mini LF and AMIRA, the takes metadata will be accessible directly in Adobe Premiere. Not only that, but there is also a voting and filter system that allows the filtering of circled takes based on the votes that have been made on set. Reports can also be printed by accessing CineGizmo's cloud service here <https://app.cinegizmo.com/login>

It can sometimes be very time consuming to review all takes during post; many filmmakers have dealt with this issue too often. The CineTakes Plugin brilliantly takes care of this issue by allowing votes for circled takes, markers, voice markers and notes made on set to be visible in the Adobe Premiere sequence during editing.

Script supervisors and other crew members involved in the process can make use of the powerful voice feature. All they need to do is say the word and it will be recorded for any take they want.

CineTakes Plugin for Adobe Premiere is a very useful and powerful plugin that delivers flexibility and functionality on film production sets; it is currently the only plugin on the market that offers such benefits.
